Authors : Kirsanov, N. V., Kochetov, V. P. and Loginova, V. N.
Title : Complications in oil well drilling with water flushing
Periodical : Neft. Khoz., v. 32, #6, 22-27, Ju 1954
Abstract : The author describes the complications during drilling with water flushing appearing in certain geological structures, particularly in so called Kynov formations of low sub-level of Devonian formation and also through structures containing carbonic formation, argillites, siltstone, dolomites, etc. These formations are often affected by water streams and are in process of breaking down. The author outlines various methods of drilling through such layers and the use of different solution. 3 tables, 2 photos.

AUTHOR : Kochatova, G. A.
INST. : ~~Stavropol~~ Medical Institute
TITLE : Paths of Effluence of Lymph from the Lungs
and Some Data Concerning Their Development
in Ontogenesis
ORIG. PUB. : Uch. zap. Stavropol'sk. med. in-t, 1957,
No 1, 17-27

ABSTRACT : Studies of the lungs of fetuses from 2 to 8 months, of newborns -- from several hours to 1 month, of children of 12-15 years, and of adults (altogether 100 subjects). Both peripheral and internal lymphatic systems develop in fetuses of 2 - 2 1/2 months; differentiation of peripheries of the network takes place in fetuses of 3 1/2 to 4 months. Beginning with the 8th month of uterine life a lymphatic network develops in the submucosal layer of the bronchi, the capillaries of which, in the opinion of the opinion of the author, can be the beginning of lymphatic system of the lungs. Retrograde outflow of lymph between right and left lung is observed only during the

TITLE: Mirror-lens objective. Class 42, No. 179029

SOURCE: Izobreteniya, promyshlennyye obrasty, tovarnyye znaki, no. 4, 1966, 84

TOPIC TAGS: objective, optic lens

ABSTRACT: This Author Certificate presents a mirror-lens objective containing a concentric meniscus, aspherical and spherical mirrors, and a compensator. To improve the field aberration correction, the compensator consists of three lenses. The first lens is a negative meniscus, the second lens is positive, and the third is negative (see Fig. 1). The optical power of the compensator is equal in order of magnitude to the optical power of the whole objective.

Abstract : In 15 patients with subtropical anemia, the content of folic acid (FA) was determined in 24-hour urine. In a control group, the daily excretion of FA was 4.8-8.0 mg, and - after administration of 10 mg of FA - the daily excretion was up to 11-13 mg. In a patients with subtropical anemia, the amount of FA in the 24-hour urine was, in most cases, less than 5 mg and did not exceed this amount after FA administration.

"Experimental Leptospirosis in Rabbits".

Tr. Gos Nauch-Kontrol'n In-ta Vet Preparatov, Vol. No. 4, pp 354-355, 1953.

It was shown that rabbits are susceptible to leptospirosis up to the age of 30 days, and later remain nonsusceptible. The minimum lethal dose for intraperitoneal inoculation consists of 1ml of a 7- - 8-day culture with not less than 30 leptospira present in the /microscopic/ field of vision. Since rabbits are imperfectly developed until the 15th day, they are for practical purposes susceptible to infection during only 2 weeks, or from the 15th to the 30th days of life. Prophylactic immunisation, performed in similar fashion on 32 young dogs and 69 rabbits, yielded identical results for both species of animals; the suitability of rabbits as subjects for the testing of leptospirosis vaccine and serum was demonstrated. Title : The Use of Hypothermia and Neuroplegic Substances
in a System of Complex Antishock Measures in Severe
Experimental Burns.

Orig Pub: Vestn. Khirurgii, 1957, Vol. 79, No 8, 91, 98, 157.

Abstract: Experiments were run on 55 dogs. The use, in the course of the first five to seven hours following burn, of deep artificial hypothermia induced by ether and oxygen anesthesia with general cooling of the animals to a body temperature of 28 degrees C, and with the simultaneous transfusion of the I. R. Petrov blood substitute (I) in doses of 15-20 ml/kg, glucose (II) in amounts of 150-200 mg/kg,

Card 1/3

USSR / Pharmacology, Toxicology. Narcotic Substances V

Abs Jour: Ref Zhur-Biol., No 18, 1958, 85031.

Abstract: vitamins (III) in the following amounts (mg/kg): vitamin C, 15-20, vit. B₁, 10-15, vit. B₆, 1-1.5, and vit. PP, 4-5; and sodium bromide (IV) in doses of 25-30 mg/kg did not prevent the development of burn shock and did not essentially influence the duration of life of the experimental animals. Comparable results were obtained upon prolonged light, artificial hypothermia with maintenance of the body temperature within the limits of 32-35 degrees C, achieved by injection of a neuroplegic mixture (aminazine, lidol, dimedrol, and novocaine), small doses of sodium pentothal, and physical cooling with the simultaneous use of I, 2-aminopeptide, III, II, and IV. A complex of antishock measures consisting of I, 2-aminopeptide, II, III, and IV,

PHASE I BOOK EXPLOITATION

SOV/6283

Devyatova, V. A., Candidate of Geographical Sciences, and V. V. Kochetygov, compilers.

Rukovodstvo po vysetnomu vertikal'no-gorizontal'nomu zondirovaniyu atmosfery na samolete Il-28 (Handbook on High-Altitude Vertical-Horizontal Sounding of the Atmosphere in the Il-28). Moscow, Gidrometeoizdat, 1962. 146 p. Errata slip inserted. 600 copies printed.

Sponsoring Agency: Glavnoye upravleniye gidrometeorologicheskoy sluzhby pri Sovete Ministrov SSSR.

Ed.: V. A. Devyatova, Candidate of Geographical Sciences; Tech. Ed.: I. M. Zarkh.

PURPOSE: This handbook is intended for pilots, navigators, and on-board aerologists for high-altitude sounding in Il-28 aircraft. It may be used by synoptic meteorologists and specialists connected with the planning and supervision of sounding flights.

Card 1/4

Handbook on High-Altitude (Cont.)

SOV/6283

COVERAGE: The book describes methods of visual and instrumental observations of the atmosphere from Il-28 aircraft. The K4-51 recording instrument is described in detail. A new device for processing film is also described.
